Press Release

eBusiness Platform Creates High Performance Teams

Pittsburgh, PA, March 6, 2017 — Project Execution Network, a Pittsburgh-based leader in business development solutions, has introduced the technology industry's first fully integrated eBusiness platform focused on the needs of small and midsize businesses (SMBs). The ProjexTeam™ platform provides essential functionality for SMBs seeking solutions for strategic and operational issues.

ProjexTeam™ is a secure, scaleable, cloud-based platform that helps teams create, store, organize, modify, share and discuss critical business information … in real time … on any device. By enhancing team collaboration, communication, coordination and control, business projects can typically be completed in 30% to 40% less time compared to legacy methods. The platform is brandable and can be configured to the unique needs of any SMB.

Core functions of the ProjexTeam™ eBusiness Platform include project planning, activity tracking, documentation management, content management, networking/messaging and online training. A comprehensive family of modular options can be added to the platform at any time.

These options include business process applications, department solutions, virtual offices, functional plugins and design templates. Third-party products can also be integrated using the platform's RESTful API.

Projex Execution Network's business process applications include business planning, marketing management, sales enablement, IT management, process

optimization and HR management.

SMBs can use the ProjexTeam™ platform and its modular business process applications to optimize the performance of existing department teams, or they can take advantage of Project Execution Network's on-demand talent solutions to supplement internal skills and resources. Certified service capabilities are offered through individual resources, managed project teams or complete Department-as-a-Service™ solutions.

About Project Execution Network LLC:

Project Execution Network combines advanced analytics, a cloud-based consulting technology platform and experienced, on-demand talent to help small and midsize businesses achieve their objectives for growth and profitability. Our data-driven process can help clients execute high performance across all major business functions … from business, marketing and sales to operations, human capital management and information technology.
